Press Release - for immediate release

Versatile Mixed Layout DIN 41612 Connectors

Flexibility is at the heart of the extended range of Mixed Layout DIN 41612 connectors now available from Cambridge Connectors. Signal, coaxial and power communications can all be combined in the same body (if required, even pneumatic connections can be incorporated) making these connectors ideal for applications such as process control, aerospace & defence, ATE, measurement systems and industrial instrumentation. Available in standard, 1/2 and 1/3 body sizes the connectors are pre-loaded with signal contacts and provide cavities for pneumatics; 50 ohm or 75 ohm coaxial contacts; high voltage contacts and high power contacts up to 40 Amps. Ordered separately, the contacts have a variety of plating options and come in PCB, crimp and solder termination styles. A selection of cable and stackable housings, hoods, locking frames, shrouds and latches completes the versatility of the range.

Further details can be found at www.cambridgeconnectors.com or by phoning Cambridge Connectors on 01223 860041.
